Harini Sanagapalli

Guntur, India
sanagapalliharini4@gmail.com | +91-8688784616 | GitHub | LinkedIn | Portfolio

Computer Science graduate specializing in Data Science and AI with practical experience in dashboards, data analytics, and security auditing. Skilled in optimizing code, improving visualization, and translating data into actionable insights. Eager to apply analytical and technical strengths in a data-driven role.

Experience

Salesforce Developer Intern – Smart Bridge Organization Nov 2023 – Dec 2023

- Developed and customized Salesforce Lightning Components and Apex classes/triggers to automate business processes using Salesforce Flow and Process Builder, improving workflow efficiency and application functionality.
- Gained hands-on experience in Salesforce development by building scalable solutions and collaborating in a virtual internship environment to meet real-world business requirements.

Data Analyst Intern – Smart Internz Organization July 2024 – Sep 2024

- Designed and optimized interactive Tableau dashboards to visualize large datasets and deliver actionable insights that supported data-driven business decisions.
- Analyzed and interpreted complex datasets to identify trends, patterns, and key performance metrics, improving business reporting and overall analytics processes.

Data Science Intern – Oasis Infobyte Aug **2024** – Sep 2024

- Applied machine learning algorithms to analyze datasets and build predictive models, generating actionable insights to support data-driven decision-making.
- Performed end-to-end data processing using Python (Pandas) and SQL, increasing efficiency and reliability of data-driven solutions through structured analysis.

Technical Skills

- **Programming & Analytics:** Python (Pandas, NumPy, Matplotlib), C, HTML
- **Data Tools:** Excel / Google Sheets, Power BI (DAX, Power Query), Tableau
- **Databases:** MySQL (Joins, Subqueries, Window Functions)
- **CRM & Cloud Platforms:** Salesforce (Apex, Lightning, Flows)
- **Version Control:** Git, GitHub

Education

Chebrolu Engineering College, Chebrolu 2021 – 2025
B. Tech in Data Science CGPA:8 . 0

Projects

Detection Of Fake News Through The Implementation Of Data Science Application

- Utilized Python libraries including Pandas, NumPy, TensorFlow/Keras, and Scikit-learn for model development and evaluation.
- Developed and trained an LSTM-based deep learning model to detect fake news, leveraging word embeddings for enhanced text representation.
- Executed end-to-end data preprocessing, including cleaning, tokenization, and feature engineering, improving model input quality.
- Evaluated model performance using accuracy and classification metrics, achieving reliable differentiation between real and fake news articles.

Netflix Data Analysis Dashboard using Power BI & Tableau

- Built interactive Power BI dashboard analyzing Netflix movies and TV shows across countries for actionable insights.
- Created visualizations (bar, pie, world map) to highlight genre distribution, ratings, and regional content trends.
- Published dashboards via Power BI Desktop and Web Service for easy access and stakeholder reporting.
- Automated data refresh and integrated multiple datasets to ensure accurate, up-to-date, and comprehensive analysis.
- Designed and deployed a Tableau dashboard leveraging calculated fields, filters, and geographic maps to visualize content distribution, ratings patterns, and country-level trends.

COVID-19 Data Analysis Using MySQL

- Imported and structured real-world COVID-19 dataset into MySQL and performed data cleaning and validation.
- Implemented structured SQL queries to generate summarized reporting tables, enabling clear comparison of country-wise trends and key COVID-19 metrics.
- Applied SQL queries using **SELECT, GROUP BY, ORDER BY, and aggregate functions (SUM, COUNT)** to analyze country-wise cases.
- Calculated key metrics including **death rate and recovery rate percentages** to derive analytical insights.
- Identified top affected countries and analyzed date-wise growth patterns to support data-driven reporting.

Certifications & Achievements

- Deloitte Australia – Data Analytics Job Simulation
- HackerRank – Python and C (Skill Badges)
- Great Learning – SQL for Data Science
